Brief Summary

- Created a Resource Group (**RG-ADF-Week4**) in Microsoft Azure.
- Created an Azure Storage Account and configured Blob Storage containers.
- Uploaded the **Sample-Superstore.csv** file into the **sourcedata** container.
- Created an Azure Data Factory (**adf-harshitha-2026**).
- Configured a Linked Service to connect Azure Data Factory with Azure Blob Storage.
- Created source dataset (**DS_Source**) and destination dataset (**DS_Destination**).
- Designed a pipeline containing **Get Metadata** and **Copy Data** activities.
- Used **Get Metadata** activity to validate the source file before processing.
- Configured the **Copy Data** activity to copy data from the source container to the destination container.
- Assigned the required IAM roles (**Reader** and **Storage Blob Data Contributor**) to enable ADF access to Storage Account.
- Executed the pipeline successfully using Debug/Trigger.
- Verified successful execution in the Monitor section.
- Confirmed that the output file (**Copied_Superstore.csv**) was created in the **destinationdata** container.
- Successfully implemented an end-to-end Azure Data Factory pipeline for data movement and metadata validation.
